	Total:	100

Project Milestone 4: Final Report and Presentation

Socioeconomic Development and Household Well-being in South Africa (SDHSA)

Purpose

Milestone 4 is the final synthesis of the project. Your team must communicate the complete CRISP-DM journey, demonstrate the final analytical solution and translate technical findings into clear recommendations for decision-makers.

Key principle
The final submission is not a copy-and-paste compilation of Milestones 1-3. It must be a coherent, refined and concise account of the business problem, project steps, key findings, ethical implications, relevant evidence and recommendations.

Tasks

This milestone consists of the following steps that should be submitted as an assignment on given due date.

Task 1 - Final Power BI Decision-Support Dashboard

- Develop a polished Power BI interactive dashboard aligned with the stakeholder and decision problem.
- Use appropriate measures, filters, comparisons and drill-downs to communicate key indicators, patterns, insights and findings from the cleaned and final data.
- Ensure visualisations are accurate, readable and consistent with the final analytical dataset.
- Avoid dashboards that merely display every variable. The dashboard should answer defined decision questions.

Task 2 - Comprehensive Final Report

- Produce a coherent final report covering the complete CRISP-DM lifecycle phases and the final decisions made.
- Explain the business problem, selected data, integration strategy, major preprocessing decisions and validation evidence, modelling, evaluation and deployment. Focus on decisions that materially affected the final analytical solution.
- Present the most important findings rather than every intermediate output.
- Provide evidence-based recommendations linked directly to results.
- Include limitations, assumptions, uncertainty and appropriate future work.

- Include an integrated ethics and responsible AI section showing how ethical issues were addressed throughout the lifecycle.
- Diagrams and screenshots should be labelled and sized appropriately.
- **Recommended maximum for Final Report: 10 pages of main content (1.15-line spacing and font size 11), excluding cover page, contents, references and appendices.**

Task 3 - Executive Presentation and Demonstration

- Prepare a professional presentation of no more than 10 slides.
- Present the problem, data strategy, key findings, model performance, recommendations and limitations.
- Demonstrate the Power BI dashboard and deployed R/Shiny analytical/model component.
- All team members should be able to explain the project decisions and technical work. Failure to convincingly defend your project and decisions will result in loss of marks.

Task 4 - Project Review and Handover

- Reflect on your overall experience during the project (what worked, what surprised you, what changed across milestones, what did you learn and what could be improved?)
- Document final repository structure, dependencies and instructions required to reproduce the work.
- Provide monitoring/maintenance and handover notes for the analytical solution.
- Submit the final ethics report and responsible AI usage log.
- Ensure all code, in-line text, comments and outputs are organised, documented and run without unresolved errors.
- **Ensure that all your code is well-organised according to the CRISP-DM stages, thoroughly documented, uses appropriate data science libraries and tools, runs without errors, produces correct results, and is optimised for efficiency and performance.**

Required Deliverables

- Final Project Report in PDF format.
- Final Power BI (.pbix) file for visual storytelling and interactive dashboards.
- Executive presentation (maximum 10 slides).
- Final R Markdown/Quarto analysis and supporting R scripts.
- Functional R/Shiny or approved R-based deployment.
- Final analytical dataset(s) and team data dictionary.
- Final ethics report and responsible AI usage log.
- Code repository / submission archive with reproducibility and handover instructions.

BELGIUM CAMPUS iTversity It's the way we're wired	Assessment:	Project Milestone 4 (Final)
	Subject:	Business Intelligence 381
	Total:	100

Assessment Rubric

Criterion	Evidence expected	Marks
Final problem framing, project goals and CRISP-DM coherence	Clear statement of the business problem and project goals and alignment to the CRISP-DM methodology	**10**
Data strategy, preparation and integration	Final data decisions are technically correct, traceable and justified.	**15**
Analysis, modelling and evaluation	Rigorous final analysis, validation and interpretation. Recommendations based on findings	**15**
Power BI decision-support dashboard	Useful, accurate, interactive and stakeholder-focused BI dashboards and reports.	**15**
Deployment demonstration	Functional and usable deployed R-based analytical/model component.	**10**
Findings, recommendations and limitations	Evidence-based conclusions and actionable recommendations with appropriate caution.	**10**
Ethics Report and Responsible AI Usage	Integrated treatment of privacy, bias, fairness, transparency and responsible AI use.	**10**
Final report quality and Code reproducibility	Professional synthesis, clear writing, reproducible code and organised handover.	**5**
Executive presentation and defence	Clear, concise presentation and demonstrated team understanding.	**10**
TOTAL MARKS:		**100**

Originality and Academic Integrity

The project is intentionally open-ended. Teams may select additional datasets, construct different analytical features and choose different modelling strategies. The project encourages originality and recognises that there may not be a single correct answer to every aspect of the problem. Even though the emphasis is on CRISP-DM, applying the same methodology to the same business problem does not necessarily yield the same outcomes. The key is to make informed and sound decisions that align with the expectations of a data science project. The success of this project will be judged not only by the final outcome but also by the originality, rigour, logic, and thoughtfulness applied to the various stages of the project. A well-documented and well-justified project demonstrates a thorough understanding of data science principles and practices, which is a key objective of this project. Similarity of methodology does not justify copying another project. The final submission must show the team's own reasoning, code, evidence and interpretation. Plagiarism or unauthorised reuse of previous submissions will be handled according to institutional academic-integrity rules.

BELGIUM CAMPUS iTversity It's the way we're wired	**Assessment:**	**Project Milestone 4 (Final)**

Additional Information

- This is a group project. Please continue with your allocated project groups.
- All work must be original. Copying another group's work will not be tolerated.
- Includes names of all group members on the cover page.
- Submit your project milestones electronically on Moodle (BC Connect) before the due dates.
- All writing must be correctly cited and referenced, and the use of AI must be explicitly acknowledged.
- **Plagiarism is a serious offence.** Belgium Campus makes use of software that can scan for plagiarism and penalties apply for any plagiarised work including getting a **0** for the assignment.
- No mark will be awarded if the assignment is not uploaded via BC Connect.
- Late assignments will not be accepted; missing the deadline is an automatic **0**.
